## Phoenix Sid Extractor V1.3 BETA-95

Initiate Customization The image is not in the jpeg file that you have selected for upload. A: This warning appears to appear on any image that I upload, using the example in my comment as the base. I have tried: Reducing the number of files to be uploaded. Adding a border and changing the image sizes to make them "standard" dimensions. Changing the main image dimensions to have the same aspect ratio as the file and then saving it as a different file size from the original. However, even on my first attempt of an image file, I have had the same warning pop-up multiple times. There are a lot of files that do not pass the file size check, and I know that they are valid photos because I have both the .jpg and the .png extension, and the file size is lower than the maximum upload. I'm using the latest version of Windows 10 (1607). Any ideas? FILED NOT FOR PUBLICATION JUL 29 2013 MOLLY C. DWYER, CLERK UNITED STATES COURT OF APPEALS U.S. C O U R T O F APPE ALS
